

4525

Preliminary

- PCB Mounted Pressure Transducers
- Amplified Ratiometric Output
- Differential & Gauge & Absolute
- Temperature Compensated
- 3.3V or 5.0 Vdc Supply Voltage

DESCRIPTION

The 4525 is a small, ceramic based, PCB mounted pressure transducer from Measurement Specialties. The transducer is built using Measurement Specialties' proprietary UltraStable™ process and the latest CMOS sensor conditioning circuitry to create a low cost, high performance transducer designed to meet the strictest requirements from OEM customers.

The 4525 is fully calibrated and temperature compensated with a total error band (TEB) of less than 1.0% over the compensated range. The sensor operates from single supply of either 3.3 or 5.0Vdc.

The rugged ceramic transducer is available in side port and top port version and can measure absolute, gauge, or differential pressure from 0-1 to 0-150 psi. The 1/8" barbed pressure ports mate securely with 3/32" ID tubing.

FEATURES

- PSI Pressure Ranges
- PCB Mountable
- High Level Analog Output
- Barbed Pressure Ports

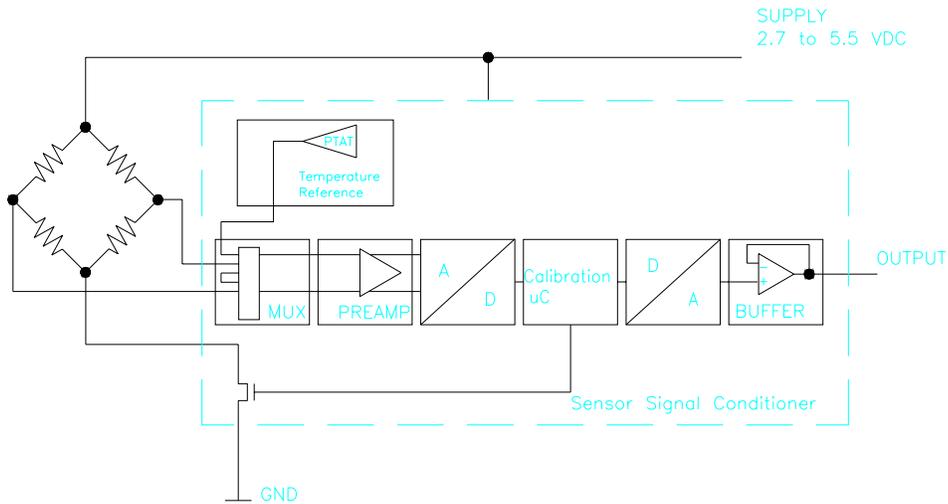

APPLICATIONS

- Factory Automation
- Altitude and Airspeed Measurements
- Medical Instruments
- Leak Detection

Notes

1. Output is ratiometric to supply voltage.
2. Accuracy: The maximum deviation from a best fit straight line (BFSL) fitted to the output measured over the pressure range at 25C. Includes all errors due to pressure non linearity, hysteresis, and non repeatability.
3. Total error band includes all accuracy errors, thermal errors over the compensated temperature range, and span and offset calibration tolerances..
4. This product can be configured for custom OEM requirements, contact factory for lower power consumption or higher accuracy.

ORDERING INFORMATION

4525

Pressure Type	Description
Absolute	Output is proportion to the difference between vacuum reference and pressure applied to Port 1.
Differential	Output is 50% of supply voltage when Port 1=Port 2. Output swings positive when Port 1 > Port 2
Gauge	Output is proportional to difference between ambient pressure and Port 1. Output swings positive when Port 1 > Port 2
